

Figure 1. The ^{13}C NMR spectra of the polyimides 1a–1f. The chemical structures of the polyimides 1a–1f are shown in the inset.

- (a) one or more UV filter substances which bear one or more sulphonic acid groups or sulphonate groups on their molecular backbone and
- (b) one or more surface-active substances selected from the group of mono- or oligoglyceryl esters.
